

FLAT

FoLiA Linguistic Annotation Tool

Introduction (1/2)

What is FLAT?

- **FoLiA Linguistic Annotation Tool**
- A web-based tool for linguistic annotation of language resources
- Many different annotation types
- Flat is anything but “flat”, it deals with deeply nested data and retains document structure.
- Aims to be a fully-featured annotation environment for FoLiA documents (currently in an early beta stage!)

Introduction (2/2)

What is FoLiA?

- Format for **L**inguistic **A**nnotation
- An XML-based file format for storing and exchanging language resources
- Generic paradigm independent of language or label set
- Single format for all
- Implemented in many tools (*ucto, frog, ucto, pynlpl, ticcl, folia-tools*)
- Used in many projects (*SoNaR500, Nederlab, DutchSemCor, Basilex, OpenSoNaR*)
- Funded by CLARIN-NL

Notable Features

- Modern **web-based** interface
- **Multi-user** environment
- Download and upload FoLiA XML documents
- **Concurrency** (multiple users may edit the same document simultaneously)
- Storage model with [git] **versioning control** (unlimited undo operations)
- Full **annotator information**: who annotated what and when?
- Layered, retains **document structure**
- Annotations may pertain to single tokens or span over multiple (span annotation)
- Support for **corrections** of either text or linguistic annotations. Corrections are never mere substitutes, originals are always preserved!
- Support for alternative annotations.
- Introduces FoLiA Query Language for automated and batch editing

Stemma

Stemma is een ander woord voor **stamboom**. In de historische wetenschap wordt zo'n stamboom, onder de naam stemma verwantschap tussen handschriften weer te geven.

Werkwijze

Hiervoor worden de handschriften voor het originele handschrift. De andere handschriften waarvan men toch vermoedt dat ze ook van de oorspronkelijke afstamming afstammen, worden ook in het stemma opgenomen en worden weergegeven.

Tenslotte gaat de verwantschap tussen de handschriften aan de hand van een volle lijn duidt op een verwantschap, terwijl een gedeeltelijke lijn op een onzekere verwantschap duidt.

In the field

Currently used in two projects:

1. A project with *College van Examens*: Spelling correction on texts of children and on automatic corrections by Valkuil.net, annotated by four student assistants.
2. A project concerning the annotation of named entities, specifically locations, in historical texts from World War II, with *Susan Evans*, *Marten Düring* and *Antal van den Bosch*

OPERATION MARKET GARDEN

18th Sept 1944 1100 hours **Saltby Aerodrome**

Emplaned on **US Dakota aircraft** for **Arnhem**. Some Gliders observed ditched in **English Channel**. Anti-aircraft 1400 hours Dropped on DZ (Ginkel Heath) Light anti-aircraft and machine gun fire as we dropped. DZ was be- twisted leg on landing so I took over as **No1 Rendezvous** was on edge of **DZ** which we both made.

1500 hours Moved along railway line in direction of **Arnhem** then through **Wolfheze**. We were held up by ene- houses to try to take out enemy. **Nick** and I were on top of a garden wall and about to drop when enemy mach- great speed. We found it impossible to proceed via the rear of the houses as the **Germans** had it well covered. short time but no enemy seen. Orders were given to withdraw back along **railway line**. We bedded down in the **Bren Gun**. Enemy were firing tracer bullets trying to attract our fire so they could find our positions. I lay **pylon** above my head. I was relieved after about 2 hours. And was glad to rejoin my comrades. Attempted to mortar bomb.

19 Sept
